Seriously single-minded about Teak Decks

Specialising in teak decks for super yachts around the globe, we've spent some serious time refining and improving the process.

Using Proliner digital technology and vacuum bagging techniques, we have shaved countless man hours off the usual installation time. Our decks are completed faster, cost less and last longer.*

This makes us the first choice for some of the world's premier super yacht owners and boat builders.

So if you're serious about your teak deck, talk to the specialists. You can be sure you'll have our single-minded attention.

* Compared with decks laid without using vacuum bagging and Proliner digital technology.
