## Super Yacht Refits

New Zealand's pristine, spectacular cruising waters meet the region's best marine service centre in the heart of Auckland City – The Viaduct.

Kiwi boat builders have a well deserved reputation for nautical prowess and a huge capacity for hard work. As a result, The Auckland Viaduct is home to an impressive refit and repair infrastructure, producing some of the finest quality refits anywhere in the world. Catering for predicted growth, significant development is underway at the site known as Wynyard Point in Westhaven. This will transform the area into a truly world class yacht hub.

## Nautical Contracting's Refit Services

At Nautical Contracting we provide refit services to super yachts around the globe. With specialist expertise in teak decks, we handle all forms of wood work and custom joinery, refitting and customizing interiors and exteriors and replacing worn fittings.

## A choice of accessible locations

Nautical Contracting's home port is The Viaduct in Auckland. In addition, high quality overflow facilities are available to the North and South of Auckland.

## Completely portable operating system

Whether we are at home in The Auckland Viaduct, or any international port, our operating system is unchanged. We often measure and quote in one port, then install in another, fitting in with a vessel's cruising schedule and minimizing down time.

We use Proliner digital technology to provide exact measures and go straight to CAD drawings.

Where haul out is not required, we use the innovative shrink wrapping system to provide an air-conditioned waterproof membrane fully enclosing the vessel. This system means work really can take place anywhere, any time.

## Highly experienced teams

Our highly experienced teams of NZ qualified boat builders work with some of the world's premier super yacht owners and boat builders. Collectively, we have experience in all forms of boat building including steel, aluminium, fiberglass and wooden construction and understand the importance of isolating different materials to avoid corrosion.

## Meeting your deadlines

We draw from a large pool of nautical labour resources, comprised of qualified, reputable boat builders and associated trade contractors. This allows us to ramp up or down to meet our customers' tight stopover timetables. Of course, the more notice you can give us the better!

So, talk to us, or your preferred yacht agent, and we can schedule your upcoming refit requirements.
