

Superfineteak, a viable alternative to conventional teak, is now available in New Zealand, Australia and the USA exclusively through Nautical Contracting.

Developed by Italian teak specialists, Ciemme, Superfineteak uses the latest Akzo Nobel adhesive technology to fuse together strips of teak, selected for their color and quality.

Using this system a Superfineteak plank or coverboard is precisely engineered to any width required and in long lengths. Production technology is continually being enhanced, currently lengths of upto 4 metres are available, and inside 6 months it will be possible to order Superfineteak in 6 metre lengths.

Retail price is 12,000 euros per finished cubic metre. Contact us for a price for your project, converted to USD per sq ft.

With a consistency of color and uniformly straight grain, its superior quality makes Superfineteak highly desirable for any nautical or architectural project.

Laboratory tests for physical strength, conducted by Akzo Nobel, give Superfineteak ratings for hardness, resistance and elasticity that outperform conventional teak.

This patented product uses only timber that has been certified by the Forest Stewardship Council.

The Teak Specialists

From our base in Auckland, New Zealand, we complete teak projects on Super Yachts around the globe. Talk to us about:

- Teak Decks
- Deck Maintenance
- Deck Refits
- Custom Joinery and Furniture
- Teak Gratings and Crow's Nests

The Latest Digitizer Technology

We now use Proliner digital technology, which enables us to provide a fast and accurate quote for your project, plus create CAD drawings in minutes. This means that once you accept our quote we can immediately begin manufacture. Not only does this significantly reduce our production timeframe but it also ensures there is no material wastage or misfits.

How we Operate

- Digital measure and quote, from which deck designs go straight to CAD drawings.
- We then manufacture pre-assembled, pre-trimmed decking panels in our workshop ready for installation. These are packed and shipped to your chosen location.
- We handle the full installation using our highly recommended vacuum bagging technique. Fast and efficient, this method results in no fastenings being used, which looks great and reduces wear.

The Proliner digitizer

Proliner digital measurements go straight to CAD drawings.

Recent Projects

MY Unbridled, built by Trinity Yachts, Mississippi

Steve King headed one of our nautical labour teams based in Mississippi. We completed the lazerette fit out and teak sole; shelves and cabinetry in the crew's quarters; engine room cabinetry and a number of other finishing details that fell outside of the boat yard's contract.

Gary Knox, the Owner's Representative, comments *"Steve and the team worked really well, fitting in almost as part of our own crew. We were very happy both with the quality of their workmanship and their friendly, adaptable manner. We have no hesitation in recommending them to anyone requiring high quality nautical labour for any project."*

Finishing details on MY Unbridled, in Mississippi

Salperton IV, for Fitzroy Yachts, New Plymouth, NZ

Meanwhile Andrew Hope managed the teak decking project on Salperton IV, the follow-up vessel to the award winning Salperton III. Handling the full design, manufacture and installation of teak decking for Fitzroy Yachts on both projects has been a successful formula.

Rodney Martin, Managing Director of Fitzroy Yachts confirms *"We were impressed with the quality of their workmanship, their professionalism and their commitment to completing the job by our requested deadline. This flexible approach and their commitment to meeting our requirements, makes it a pleasure to work with Adrian, Andy and the team at Nautical Contracting."*

Work is now underway on the latest Fitzroy Yachts X50.

Burmese Teak Milled in New Zealand

In another first, we are about to become the only New Zealand company to mill its own marine teak. If you have an upcoming project and will require teak, we can mill to your specification. We have a shipment of teak logs on its way to us at time of brochure print.

Call us to confirm a price for your next project based on volume and your timeline.

Global Joint Venture

With our Superfineteak partners, Ciemme S.R.L in Italy and Sunwood Industries in Thailand we can now produce pre-assembled teak decking panels for production boat yards around the world, at very competitive rates.

We have combined Nautical Contracting's teak decking expertise, with Sunwood's meticulous Thai labour and Ciemme's Italian innovation to create a global consortium. This agreement allows us to manufacture pre-assembled Superfineteak decking panels on a massive scale at volume prices.

Not surprisingly, there has already been strong interest from some major European boat yards.
